

The facts may shock

Sudden Cardiac Arrest kills approximately 300,000 people each year, more than breast cancer, lung cancer and HIV/AIDS **combined**.

When someone collapses from Sudden Cardiac Arrest, damage to vital organs begins in as little as 4 minutes.

A shock from an Automated External Defibrillator is the single most effective way to reset your heart to prevent permanent damage.

Help Santa Clara Unified place life saving AEDs on our campuses for as little as a penny a day.

A Penny a Day can Save a Life!
